1. Write a script to print Fibonacci series up to n terms
2. Write a script to check if a string is a palindrome
3. Create a script to calculate the power of a number
4. Write a script to find the second-largest number in a list
5. Create a script to check if a number is prime or not
6. Create a script to find the sum of digits of a number
7. Create a script to display the multiplication table of a number

1. Fibonacci Series

```
# Prompt user to enter the number of terms
echo "Enter the number of terms for Fibonacci series:"
read n

# Initialize the first two terms
a=0
b=1

# Print the Fibonacci series
echo "Fibonacci series up to $n terms:"
for (( i=0; i<n; i++ ))
do
   echo -n "$a "
   fn=$((a + b))
   a=$b
   b=$fn
done
echo ""
```

2. Palindrome

```
echo "Enter a string:"

read str

# Reverse the string

rev_str=$(echo "$str" | rev)

# Check if the string is the same as the reversed string

if [ "$str" == "$rev_str" ]; then

   echo "$str is a palindrome"

else

   echo "$str is not a palindrome"

fi
```

3. Power of Number

```
# Prompt user to enter the base and exponent
echo "Enter the base:"
read base
echo "Enter the exponent:"
read exp

# Calculate the power
result=1

for (( i=0; i<exp; i++ ))
do
   result=$((result * base))
done

# Output the result
echo "$base raised to the power of $exp is $result"
```

4. Find the Second largest.

```
# Prompt user to enter numbers
echo "Enter a list of numbers separated by spaces:"
read -a numbers

# Sort the array and find the second largest
sorted=($(echo "${numbers[@]}" | tr ' ' '\n' | sort -nr))

# Output the second largest number
echo "The second largest number is: ${sorted[1]}"
```

5. Prime Number

```
#!/bin/bash

# Prompt user to enter a number
echo "Enter a number:"
read num

# Check if the number is prime
is_prime=1

for (( i=2; i<=num/2; i++ ))
do
   if [ $((num % i)) -eq 0 ]; then
      is_prime=0
      break
   fi
done

if [ $num -le 1 ]; then
   echo "$num is not a prime number"
elif [ $is_prime -eq 1 ]; then
   echo "$num is a prime number"
else
   echo "$num is not a prime number"
fi
```

6. Sum of Digits

```
#!/bin/bash

# Prompt user to enter a number
echo "Enter a number:"
read num

# Initialize sum
sum=0

# Calculate the sum of digits
while [ $num -gt 0 ]
do
   digit=$((num % 10))
   sum=$((sum + digit))
   num=$((num / 10))
done

# Output the result
echo "Sum of digits: $sum"
```

7. Multiplication Table

```
#!/bin/bash

# Prompt user to enter a number
echo "Enter a number to generate its multiplication table:"
read num

# Print the multiplication table
echo "Multiplication table for $num:"
for i in {1..10}
do
   echo "$num * $i = $((num * i))"
done
```
